```java
public class NavigationService {
      Server server;

      public Path findPath(Location l, Time t, Settings s) {
            Path[] ways = server.ask(l, t);
            // Exclude paths which break settings' constraints
            // Select the shortest path remaining
            return chosenPath;
      }

      [...]
}
```
